
Movie n Games

TMBD and RAWG api integration

Introduction

Our website MG is a platform that allows you to search movies and games. Normally what happens is that whenever we get bored and we want to watch a movie, we have to surf different sites to know about the movie ratings, to know about the reviews and to watch the trailer we have to go to YouTube separately.

Problem Statement :

In today's world we are very busy with our lives. We are always in a rush to do our work. We don't have time to do anything . So in order to give some relief from this hectic schedule we have made a website named Movies n Games.

Objective-

- I. To provide a single platform for fun activities
- II. You can enjoy trailer and ratings at one site
- III. Putting Digital games and movies together
- IV. To provide people with trending movies and games their complete info at one site
- V. To give the viewers with the best .

Features

MG is the platform which solves all these problems. You have to just type the name and then a single click and all the data is here. You get the release date , the genre, and you can watch the trailer too.

- I. Provide user with data on Movies and Game
- II. Search feature for Movies
- III. Search feature for Games
- IV. Provide Detail of Movies

-
- V. Provide Details of Games

Technologies Used:

- I. HTML
- II. CSS
- III. Boot-strap
- IV. J-query
- V. JAVA-SCRIPT
